

Smart Invisible Shield

# Prevention Through Protection

Unique **invesil™** formula contains patent pending TRION™ technology that imparts the coated surface an optimum broad spectrum antimicrobial protection. Presence of Zirconium, Tantalum and Silver gives a cutting edge to the product that was never envisioned earlier

No other commercial product contains silver in ionic as well as nanoparticles format for a longer lasting effect. TRION™ nanoparticles are distributed uniformly at the nanoscopic level that creates incessant sanitized surface for invasive pathogens. **invesil™** is a biostatic coating, so no worries of superbugs due to ions leaching out of coated surfaces

- ▶ Better than 99.99% protection from bacteria, fungi and virus
- ▶ Single component, environmental and user friendly material
- ▶ Coating has thickness that is 1/10th of average human hair and hardness value approaching 200 MPa
- ▶ Hard to scratch therefore provides long term surface protection
- ▶ Coating can adhere strongly to wide variety of substrates including textiles, metals, plastics, paints, concrete etc.
- ▶ Transparent, does not hide the appearance of coated surface
